

PRODUCT PERSONAS 2

Demographics

- Name: Anthony Blanc
- Age: 40
- Location: Austin, USA
- Job: Engineering Manager / Platform Owner
- Salary: \$140,000–\$170,000/year
- Experience: 12+ years in software engineering and team leadership
- Team: Manages multiple backend and platform teams

Profile

- Oversees platform infrastructure used by multiple development teams.
- Responsible for scalability, security, and operational efficiency.
- Focuses on governance and cost management of AI services.
- Ensures teams follow platform standards and policies.

Interests

- Infrastructure scalability and system governance
- Cost optimization and budget control
- Monitoring and analytics dashboards
- Cloud platform management
- Security and access control

Frustrations

- Lack of centralized visibility into AI spending.
- Difficult to control usage across multiple teams.
- Hard to enforce security and usage policies.
- Risk of unexpected cost spikes from AI services.
- Limited insight into which models or teams use the most resources.

Goals

- **Maintain strict control over AI usage and costs.**
- **Ensure secure and governed access to LLM services.**
- **Monitor usage across teams and applications.**
- **Support scalable AI infrastructure for growing workloads.**
- **Provide clear reporting for decision making.**

How Resilient LLM Gateway Helps

- Token Tracking & Rate Limiting (Redis) – controls usage and enforces quotas.
- Cost Aggregation (PostgreSQL) – tracks spending across providers.
- Centralized Monitoring – visibility into usage and system performance.
- Policy Enforcement – manage API access and team quotas.
- Scalable Architecture – supports multiple teams and applications.
