

PRODUCT PERSONAS 3

Demographics

- Name: Kate Kim
- Age: 29
- Location: San Francisco, USA
- Job: AI Product Engineer
- Salary: \$110,000–\$135,000/year
- Experience: 5+ years in AI application development
- Team: Works with product and ML teams to build AI-powered features

Profile

- Builds AI-powered features using LLMs.
- Focuses on rapid prototyping and experimentation.
- Frequently tests different models and prompts.
- Prefers simple APIs that reduce infrastructure complexity.

Interests

- AI application development
- Prompt engineering and model testing
- Rapid prototyping of AI features
- Developer tools and APIs
- Improving AI product performance

Frustrations

- Time spent setting up integrations for new LLM providers.
- Frequent code changes when switching models.
- Slow testing due to repeated API calls.
- High costs during experimentation.
- Managing multiple provider SDKs and environments.

Goals

- Experiment with multiple LLM models easily.
- Switch models without major code changes.
- Reduce development time for AI features.
- Run fast and cost-efficient testing.
- Focus more on product innovation than infrastructure.

How Resilient LLM Gateway Helps

- Standardized REST API – same interface for all models.
- Easy Model Switching – change providers via configuration.
- Semantic Caching – speeds up repeated experimental prompts.
- Reduced Infrastructure Work – gateway handles integrations.
- Lower Experimentation Costs – avoids repeated expensive calls.
