

SPRINT 2 BACKLOG

Story ID	User Story	Owner	Story Points	Acceptance Criteria
US6	Implement request logging system in PostgreSQL	Nisarga	5	All API requests are stored with provider, latency, status, and timestamp
US7	Implement token usage and cost tracking	Rohan	5	Each request logs input/output tokens and estimated cost
US8	Setup Redis connection and health check	Diya	3	Redis connects successfully and health endpoint returns status
US9	Implement rate limiting per API key using Redis	Prachi	4	Requests exceeding limit return 429 error
US10	Develop admin login authentication system	Pramodh	4	Only authorized users can access dashboard
US11	Build frontend chat interface for user interaction	Diya	5	Users can send prompts and receive responses via UI
US12	Display request logs and metrics on dashboard	Prachi	4	Dashboard shows latency, provider, and usage data
US13	Enhance retry mechanism with backoff strategy	Pramodh	3	Failed requests retry automatically with delay
US14	Improve fallback logic between providers	Rohan	3	System switches provider on failure without user interruption
US15	Implement API key storage and validation system	Nisarga	4	Requests without valid API key are rejected
US16	Integrate caching mechanism for repeated prompts	Prachi	4	Repeated prompts return cached response with reduced latency
